

Denmark's NIS2 Act (Lov nr. 434 af 6. maj 2025) took effect on 1 July 2025, and the registration deadline for companies in scope was 1 October 2025. Both dates have passed. The Act requires a defined set of technical risk-management measures, covering secure development, access control, encryption, vulnerability management, and incident detection. Most companies have handled the legal and policy side. Few have checked whether their actual mobile app and API systems meet the technical bar.

FIXED FEE · FIXED SCOPE

Mobile/API NIS2 Technical Gap Check

25,000-35,000 DKK	3-5 business days	Fixed fee, one report
Price	Duration	Format

Exact price depends on how many apps and API endpoints are in scope and how much existing documentation there is to review.

Included

- Scoping of the mobile apps, backend services, and API endpoints under review.
- Technical review against NIS2-style controls: secure development practices, access control, encryption, vulnerability management, and incident-detection readiness.
- Review of relevant existing material, such as architecture notes, release process, or vulnerability handling, where it exists.
- Written gap report with findings prioritized by severity and effort.
- Short executive summary for management or board use, plus a closing walkthrough of the findings.

A mutual NDA is signed before any code, credentials, or system access changes hands — standard practice, available on request, no extra fee.

Not included

- A legal opinion on NIS2 scope, or compliance certification.
- A full NIS2 compliance audit or GRC sign-off.
- A penetration test, code rewrite, or implementation work, unless agreed separately.
- ISO 27001 audit or certification work.

ABOUT THE FOUNDER

Delivered by Yeskendir Salgara, founder of Sage Nord ApS and previously a senior mobile/iOS engineering lead at Trackman.
